Cabbage, Golden Acre (Yellows-Resistant)

112 Cabbage, Golden Acre (Yellows-Resistant)

(65 days) Heads are round, about 6 in. across, very hard and firm; leaves are quite smooth and grayish green in color. Plants are short stemmed, with few outer leaves. Valuable for home garden or market. Will produce a normal crop on "cabbage-yellows" infected soil where non-resistant strains fail completely. If you live in a section where "yellows" is prevalent, do try this resistant Cabbage.

Pkt. 15c; oz. 55c; ¼ lb. \$1.65; ½ lb. \$3.00; 1 lb. \$5.50.

253 Cucumber, A and C

(60 days) The beautiful straight fruits are about 10 in. long and 2¼ in. thick, well-rounded at the ends and dark green throughout. The rich green color is retained for an unusually long time after picking. Although these characteristics make A and C ideal for shipping, they also make it desirable for the home and market gardener. Vines are robust and quite disease-resistant. For illustration, see page 27.

Pkt. 10c; oz. 35c; ¼ lb. \$1.00; ½ lb. \$1.65; 1 lb. \$3.00; 2 lbs. \$5.60; 5 lbs. \$13.50.

Leek, Elephant

314 Leek, Elephant

(90 days) An improved Leek; stalks are pearly white, large and thick, with the white part extending farther up the stalk than any other variety. Of excellent quality, tender and mild. This new variety produces straight thick stems without any tendency towards a bulb-shaped end. May be eaten like "green" onions or used in salads. They are also excellent for soups, stews or creamed. The flavor is more delicate than the mildest onions.

Pkt. 10c; oz. 30c; ¼ lb. 90c; ½ lb. \$1.40; 1 lb. \$2.50; 2 lbs. \$4.65; 5 lbs. \$11.25.

199 Sweet Corn, Golden Colonel

(90 days) Ears are like those of the famous Country Gentleman Corn in formation, differing only in the color of the grains. The kernels are tender, sweet, rich, deep golden yellow, shoe-peg shaped and arranged irregularly, without row formation, on ears 7 to 8 in. long. Stalks grow 8 ft. tall. Home and market gardeners should certainly grow this new Sweet Corn. It has a sweetness that cannot be surpassed and as it is late maturing, its superior flavor and quality are appreciated more than ever.

Pkt. 10c; ½ lb. 25c; 1 lb. 40c; 2 lbs. 70c; 5 lbs. \$1.30; 10 lbs. \$2.40, postpaid. Not prepaid: 15 lbs. \$2.70; 25 lbs. \$4.25; 50 lbs. \$8.00; 100 lbs. \$15.00.

69 Beet, Crimson King

(60 days) Beets are globular, perfectly smooth, sweet, tender, and of a beautiful even deep blood-red color throughout. If left to grow to full size, they will measure 3½ to 4 in. across. They have very small tap-roots and medium tops. For illustration, see page 12. Every home and market gardener should try Crimson King Beet. Its size and color make it excellent for canning or pickling.

Pkt. 10c; oz. 15c; ¼ lb. 45c; ½ lb. 70c; 1 lb. \$1.15; 2 lbs. \$2.10; 5 lbs. \$5.05.

106 Broccoli, Propageno (Italian)

(80 days) An improved new, early, large, sprouting Broccoli which produces one large, green Cauliflower-like head made up of many tender sprouts. After this large head is cut, a succession of smaller heads will be produced for 2 months or more. Flavor is delicate and delicious. Make a generous planting for a good supply all summer and fall. Earlier and more productive than the Calabrese variety.

Pkt. 10c; ½ oz. 25c; oz. 40c; ¼ lb. \$1.20; ½ lb. \$2.20; 1 lb. \$4.00.

Celery, Utah or Golden Crisp

178 Celery, Utah or Golden Crisp

(130 days) Plants are compact, stalks broad and thick, exceptionally solid and when blanched are pure white, very crisp, brittle and of the most delicious nutty flavor. This is a most outstanding green Celery, the firm hard stalks keeping well if you wish to store them for winter use.

Pkt. 10c; ½ oz. 35c; oz. 60c; ¼ lb. \$1.80; ½ lb. \$3.30; 1 lb. \$6.00.

154 Carrot Morse's Bunching

(70 days) Has become universally popular with home and market gardeners. Flesh is sweet, deep orange with practically no core. Carrots are beautifully shaped, 1¼ to 1½ in. thick, 8 in. long, almost cylindrical, smooth with well-rounded shoulder tapering gracefully to the stump-rooted end. Tops are short, just right for bunching; in fact, this Carrot was shipped in bunches, in immense quantities, from California the past winter and, at once, the public pronounced it the best they had ever eaten. Try it.

Pkt. 10c; oz. 20c; ¼ lb. 50c; ½ lb. 75c; 1 lb. \$1.25; 2 lbs. \$2.30; 5 lbs. \$5.50.

OF SPECIAL MERIT

329 Lettuce, New York No. 515

(72 days) Earliest Lettuce of the New York or Wonderful type commonly called "Iceberg" by shippers. New York No. 515 is a little earlier than New York No. 12 which it resembles in general appearance. The large heads are solid, bright green in color, bleach to a beautiful white; always crisp, juicy and sweet. New York No. 515 has been bred for resistance to tipburn and will stand hot weather better than others of the New York type. It also makes wonderful heads in the fall from late summer sowings.

Market gardeners who have tried this new Lettuce have reported excellent results. Whether you are a home or market grower and you have had difficulty in raising head Lettuce in your garden, we would suggest trying this new, sure heading strain of New York.

Pkt. 10c; oz. 25c; ¼ lb. 75c; ½ lb. \$1.15; 1 lb. \$2.00; 2 lbs. \$3.70; 5 lbs. \$9.00.

720 Tomato, Glovel

(100 days) Wilt-resistant; developed by the United States Department of Agriculture and the Florida Agricultural Experiment Station. It is the result of a cross between Globe and Marvel. Vines are of medium size, vigorous and productive. The pink fruits are medium large with thick outer and inner walls giving them considerable firmness. (Illustrated on page 51.)

Pkt. 15c; ½ oz. 35c; oz. 60c; ¼ lb. \$1.80; ½ lb. \$3.30; 1 lb. \$6.00.

364 Muskmelon, Pride of Wisconsin

(90 days) The almost round melons are of medium size, pearly gray, slightly ribbed and coarsely netted. Ripens to a yellowish shade. Flesh is rich and sweet, unusually thick and orange in color. The triangular seed cavity is quite compact. Became so popular in our eastern markets when shipped here that it is now in demand by home and market gardeners everywhere. It is no wonder, for once you have tasted the sugary, luscious flesh with its sweet musky flavor, you will, no doubt, agree that it is unequalled. Order your requirements early as seed supply is limited.

Pkt. 10c; oz. 25c; ¼ lb. 75c; ½ lb. \$1.15; 1 lb. \$2.00; 2 lbs. \$3.70; 5 lbs. \$9.00.

It bears so early and so profusely that it will ripen most of its fruits in the north. The large Peppers are mild and sweet, dark green turning to a rich red when ripe. A valuable home or market Pepper for all sections. Plants are of branching growth and heavy yielding.

Pkt. 15c; ½ oz. 35c; oz. 60c; ¼ lb. \$1.80; ½ lb. \$3.30; 1 lb. \$6.00.

574 Radish, Comet

(23 days) For an early Radish that has the same good qualities as Vicks Scarlet Globe, but with a root that is more round instead of olive-shaped, we suggest that you try Comet. Its roots are globe to olive-shaped, bright scarlet in color, and have small taproots. The Radishes remain crisp and solid for a long time, in fact they are still solid when other early Radishes have become pithy. Even if left to grow to full size they still remain firm.

¼ lb. 50c; ½ lb. 75c;
1 lb. \$1.25; 2 lbs. \$2.30;

Profitable white variety for market, especially where a bunch Turnip is wanted. Of excellent quality for the table. As Turnips develop best during cool weather, a sowing may be made in early spring (as soon as the ground can be worked) to furnish roots for early summer use and another sowing in July or August for fall and winter use.

Sow seed early indoors, setting the plants outdoors after danger of frost is past, in rows 2 by 4 ft. apart. Brussels Sprouts 108 Danish Prize

The most delicately flavored vegetable of the entire Cabbage family. Plants grow medium tall and produce an abundance of large, solid, dark green, tightly folded "sprouts" or little Cabbage-like heads along the stem. Grow in moderately rich soil to avoid an excess of leaves. Sow seed in April or May in the open ground. Transplant in rows 3 ft. apart and 18 in. apart in the row. When the "sprouts" begin to form at the base of the stalk, break off the lower leaves to give them more room for growth. Pkt. 10c; oz. 25c; $\frac{1}{4}$ lb. 70c; $\frac{1}{2}$ lb. \$1.10; lb. \$1.85.

Calabrese Sprouting Broccoli

Broccoli

Culture: Same as for Cabbage. Italian or Sprouting Broccoli very much resembles a Cauliflower except in color. Bush Lima Beans

Culture: Lima Beans grow best on rich, well-drained, porous soil. As seed is sensitive to cold and wet, do not plant until all danger of frost is over; wait until the soil is warm and moderately dry, which is usually about the middle of May in the vicinity of Philadelphia. In most sections Limas are planted about 2 weeks after the first planting of Bush or Snap Beans. Plant in drills $2\frac{1}{2}$ to 3 ft. apart, spacing the seed 6 to 8 in. apart, and set them edge-wise with the eye downward and cover with 2 in. of soil. Later thin to stand 16 to 18 in. apart in the rows. Cultivate shallow and frequently until the plants blossom. Pick the pods as soon as the beans are of edible size, which, depending upon the variety, will be in 65 to 78 days after planting. A packet will plant about 25 ft. of row; a lb., 150 ft.; use 45 to 60 lbs. to an acre.

Bush Beans—Yellow-Pod

Culture: The same planting information given for Green-Pod Bush Beans (page 6) applies to the Yellow-Pod varieties as well. Beans are an indispensable part of every garden. Nearly everyone likes them; some prefer the green-pods; others the yellow or wax-pods, and many include some varieties of each in their plantings. Now that stringless, more tender and better flavored varieties have been developed, is it any wonder that Beans, especially the Dwarf or Bush type, are rapidly gaining in popularity? Make succession plantings for a continuous supply. Have plenty for daily use and to can for winter. They have the best flavor when served or canned soon after picking—Beans from your own garden will be better than any you can buy. We offer the best varieties—selected from a long list after trying them out each year.

Stringless; Excellent Quality

An improved, extra early maturing strain of Golden Wax valued because of its freedom from rust and other diseases. The rich, golden yellow pods are very attractive, 4 to 5 in. long, nearly straight, flat, broad, brittle, stringless, of excellent quality and borne in the greatest profusion. Plants grow compactly and more erect than the old Golden Wax, bearing the pods well off the ground. The rust-resistant quality of this variety makes it especially desirable for early and late sowings either by home or market gardeners. The white seeds are mottled with fawn and magenta.

A packet is enough for 20 poles, 1 lb. for 100 poles, 20 to 30 lbs. to an acre. Pole Beans may also be planted along a fence or trellis, using 1 lb. to 250 ft. of row. Maule's Pole Lima Beans

Burpee's Best Pole Lima

Culture: Pole Lima Beans prefer a warm, sandy loam soil, enriched with well-rotted stable manure. Do not plant until the ground is warm and moderately dry and the weather is quite settled. Set poles 4 ft. each way, and plant 6 to 8 Beans around each pole, placing them with the eye downward to encourage quick germination. Cover 2 in. deep. After the seedlings are well started, thin out leaving 2 strong plants to each pole. Cultivate shallow and frequently. Use one packet to 10 poles; 1 lb. to 50 poles; 30 lbs. to an acre. Small plantings may be made along a fence or trellis, putting several Beans a foot apart, later thinning to one strong plant. Such plantings would require 1 lb. to about 50 ft. of row.

Sweet, Dark Red Flesh; Popular

No other Beet can replace this well-established variety for earliness. Under favorable conditions the roots grow quickly and reach full size in an astonishingly short time. Maule's Quality Cauliflower

Culture: For early Cauliflower, start the seed of the early, quick maturing varieties indoors or under glass during February or March. When soil has become warm, transplant seedlings to the garden. For a main crop to cut during the summer and autumn, sow seed in May or early June in a specially prepared seedbed or frame; transplant seedlings to garden in late June or early July, setting the plants 2 ft. apart in rows 3 ft. apart. A packet will produce about 150 plants, an ounce about 3,000 plants. Four ounces are required to produce enough plants for an acre.

Extra Early, the Largest and Most Uniform Header

Maule's Prize Earliest has long been considered the finest, largest, most attractive extra early Cauliflower. The growth of the plants is dwarf and compact so that they can be set as close as 18 in. apart in the frame or field. Such close planting naturally means a greatly increased yield from a given space of ground. Snow White

One of the earliest Cauliflowers and remarkable for its uniformity of size, shape and type. Under favorable growing conditions and good soil, best results are to be had. Maule's Crisp Celery

Culture: For earliest Celery, sow the seed thinly in the house or hotbed in February or early March. For a late crop for fall use or winter storing, sow the seed in frames or a specially prepared seedbed in the open ground as early in the spring as the soil can be worked up into a loose condition. Cover seed with no more than ¼ in. of fine soil. Keep evenly and moderately moist until the seeds sprout which usually requires two weeks. Set plants 6 to 8 in. apart in single rows 4 ft. apart or double rows 1 ft. apart, allowing 4 ft. of space between each double row. Celery requires rich, well-manured soil and plenty of moisture for best results. It does especially good on muck soil. A packet of seed will provide about 400 plants; one oz. about 7,500 plants. Four ounces of seed are needed for an acre.

Maule's Ideal Early

206 Maule's Ideal Early Extremely Hardy (80 days) *

In this early Corn we have a variety that stands alone for the extra early market. Stalks grow nearly 6 ft. tall, which will appeal to the gardener who is interested in growing a crop of fodder as well as "early" ears. The 6 to 7 in. ears have 12 rows of pure white, attractive kernels which are tender when young and almost as sweet as any true Sugar Corn. Because of its extreme hardness it can be planted much earlier than true Sugar Corn thereby producing edible ears quite early in the season. Desirable for home use and profitable for the market gardener.

White Sweet Corn—continued

205 Maule's Colossal Early (88 days) *

The Finest Large-Eared Early White Sugar Corn in Existence

When sales of a variety of Sweet Corn continue to increase every year, as has been the case with Maule's Colossal Early since being introduced 24 years ago, it simply must be good. While Colossal Early averages 88 days to maturity, many gardeners in different sections have written us that it has produced its first ears within 78 to 80 days after planting. Quality in Sweet Corn is, however, more important for its popularity than season of maturity. Ears are 7 to 9 in. long and frequently 2 to 3 in. thick with 12 or 14 rows of large, white kernels of remarkable sweetness. Stalks grow 6 to 7 ft. tall, many of them carrying 2 to 3 ears each. If you grow any Corn, be sure to give Colossal Early a trial.

221 Stowell's Evergreen (94 days) *

One of the Best Sweet Corns for Main Crop

Many new varieties have come into existence since the day Stowell's Evergreen was first offered for sale, yet it is more popular today than it has ever been before. The answer to this is *quality, exceptional quality!* Ears are 8 to 9 in. long, set with 14 to 18 rows of very deep kernels which are exceptionally tender and sugary, and it retains its remarkable sweetness for a very long time, probably longer than any other variety. Stalks grow 7 to 8 ft. tall. Continued selection year after year has given our strain a remarkable uniformity. It has an enviable reputation for home and market growing as well as for canning.

216 Country Gentleman (95 days) *

Long Slender White Grains of Unusual Sweetness

Easily recognized by the irregular arrangement of the kernels on the cob. Seeds, when dry, are long and narrow, hence the appropriate common name of **Shoe Peg** by which it is largely known. Ears are quite large, 7 to 8 in. long, with a small white cob thickly covered with long, slender, white grains of exceptional sweetness, and it remains "in the milk" for a very long time. Has become famous all over the United States for its nectar-like sweetness; and is the joy of epicures everywhere. Stalks grow 7 ft. tall and often carry as many as three ears each which makes it an unusually heavy yielder. Splendid late or main-crop Corn for home, market and canning.

222 Maule's "Lead All" Evergreen

*Extra Large Sized Ears of Superb Quality (95 days) **

In introducing this Corn some years ago, we realized that increased size linked with superior quality were most important features that would appeal to home gardeners and market growers. Maule's "Lead All" Evergreen combines extra-large size with the superb quality found in other Sweet Corns of the Evergreen type. It produces truly handsome ears which are sweeter and larger than either Country Gentleman or Stowell's Evergreen. The stalks grow 8 to 9 ft. tall, an indication of their vigorous habit and productivity. Most of the plants produce two fine, well-developed ears measuring anywhere from 8 to 10 in. in length. They are thick and heavy, closely set with 14 to 16 rows of large, white, sweet grains. Noted for its drought-resistant qualities. Retains its fine flavor longer than most other varieties.

225 Maule's Improved Giant (95 days)

This variety is hard to beat for sweetness, succulence, size of grain, and fine table quality. The stalks make a strong, upright growth, 7 to 9 ft. tall and are supported by an abundance of roots which give good stability to the plants. While ears 9 in. long are considered very large, Maule's Improved Giant often produces ears which measure as much as 10 in. in length with 12 to 16 rows of luscious white kernels. A home and market gardener favorite.

Make furrows about 1 in. deep and press the Onions into the surface lightly but do not cover; have the rows 12 to 18 in. apart and set the Onions about 2 in. apart in the row. Green Onions may be had in a few weeks. In the vicinity of Philadelphia, Onions large enough to cook are ready in early July, but if large, ripe Onions are wanted, it is usually about the middle of July before they can be harvested. By planting sets, Onions can be produced for market or household use four to six weeks earlier than can be had from seed. A pound of Onion Sets will plant a row about 100 ft. long. Use 250 to 325 lbs. to an acre. The early lifting of an Onion crop allows for the sowings of quick maturing crops on the same ground the same season.

Parsley

Always needed for garnishing and flavoring; may be used green, or dried crisp, powdered and bottled. Easy to grow, takes but little space. May be potted up for use when green during the winter. Parsley seed is slow to germinate.

Culture: Sow seed as early in the spring as the soil can be worked; space rows 12 to 18 in. apart, and after covering seed with no more than ½ in. of fine soil, gently but firmly press it down. Thin seedlings to stand 6 to 8 in. apart in the row. A packet will sow about 20 ft. of row; an oz. about 150 ft.; 5 lbs. to the acre.

They have a very pleasing flavor somewhat like Celeriac. We offer an improved strain which has nice, smooth roots 5 to 6 in. long; flesh is white. Roots may be stored in sand for use during the winter.

Pkt. 10c; oz. 15c; ¼ lb. 30c; ½ lb. 50c; 1b. 85c; 2 lbs. \$1.55; 5 lbs. \$3.60.

A packet will sow about 40 ft. of row; an ounce about 200 ft.; 4 to 5 lbs. per acre in drills 2½ ft. apart. They are heavy at the shoulder, well rounded, and gradually taper toward the base and, therefore, are very easily dug. The white sweet flesh is of fine texture, free from core and stringiness. They cook tender, and have a fine rich flavor. Enormously productive and exceptionally smooth. An excellent winter keeper.

Roots are smooth, snow-white, and have practically no side roots. They are uniform and of good shape; grow to a good length, but not too long. Also known as **Hollow Crown** or **Improved Long Sugar**. The straight, smooth and handsome white roots are remarkably free from side roots; in fact, in this respect it is about the cleanest of all Parsnips. Its shape, size and attractive appearance make it most desirable for home or market. The white flesh is fine-grained and of superior flavor.

Pkt. 10c; oz. 15c; ¼ lb. 30c; ½ lb. 50c; 1b. 80c; 2 lbs. \$1.45; 5 lbs. \$3.40.

Peanuts

Culture: Peanuts grow best in a warm, light or sandy soil, rich in lime. Do not plant until ground is thoroughly warm. Plant in rows 2½ to 3 ft. apart; shelled nuts to be placed 8 to 10 in. apart in the rows, but if planted in the hulls, space them 16 to 18 in. apart in the row. Cover with 2 in. of soil. Cultivate and hoe freely. In the fall, before frost, dig and hang them under a shed or in an airy room to cure. A packet will sow from 15 to 25 ft. of row; a pound from 100 to 200 ft. Use 35 to 40 lbs. of seed per acre.

MAULE'S QUALITY

Fresh young Peas, picked from the vines and cooked as soon as possible thereafter, are one of the most delicious vegetables. Early maturing Peas are divided into two groups—the ripened seeds of one are smooth while the other is wrinkled. Seed of the harder smooth-seeded varieties should be sown as early in the spring as the ground can be worked. Wrinkled-seeded varieties are more susceptible to cold weather so the seed should not be sown until all danger of frost has passed. By planting some of the early, medium and late varieties at the same time, a continuous supply of fresh Peas may be enjoyed for a long time. Successive sowings of each variety may be made every 10 days until June 1. Sow again late in August for a fall crop. Space the rows 2 to 2½ ft. apart for dwarf varieties; 2½ to 4 ft. apart for tall varieties. Cover the seed 1½ to 2 in. deep. A packet will sow about 20 ft. of row; a pound 100 ft.; 90 to 120 lbs. of seed are needed to sow one acre. Varieties growing more than 2 ft. tall do better if staked up or otherwise supported.

Smooth-Seeded Early Peas

Especially valuable because seed can be planted as early in the spring as ground can be prepared.

Culture: The seed of *Spring* and *Summer Radishes* may be sown as early in the spring as the soil can be worked. Successional sowings may be made every 10 days until September, except where summers are hot in which sections sowings should be stopped from the middle of May until the first of August. Sow seed thinly in shallow drills 12 to 18 in. apart, cover with $\frac{1}{2}$ in. of soil; thin seedlings to stand 1 to 2 in. apart in the row. *Winter Radishes* require cool weather at the end of their growing season, and for that reason, seeds are sown from the middle of June to the middle of August in rows 15 to 24 in. apart; cover seed $\frac{1}{2}$ in. deep. Thin the seedlings to stand 4 to 6 in. apart in the row. A packet will sow about 20 ft. of row; 1 oz. abou. 100 ft.; 8 to 10 lbs. per acre. With little care, anyone can grow Radishes. They are at their best, however, in finely and deeply prepared soil and when growth is quick and steady.

Maule's Winter Squash

Maule's
Improved
Hubbard

Culture: Winter Squashes require the same general cultural directions as the summer varieties but need a longer growing season to mature. Fruits must remain on the vine until they have fully matured; gather them before frost, leaving part of the stem attached. Keep in a moderately warm, dry place until used. Handle carefully so as not to bruise them, for bruises may cause decay. Examine fruits in storage from time to time. Many of the Winter Squashes make excellent "pumpkin" pie. Because the plants make such a vigorous rampant growth, the hills should be spaced 8 by 8 ft. apart.

Maule's Tomatoes

Culture: Sow seed in a hotbed, greenhouse or in shallow boxes in the house, 6 or 7 weeks before the usual time in your locality for setting out the plants. Make sowings in rows 4 to 6 in. apart and cover seed $\frac{1}{2}$ in. deep. When the plants are about 2 in. high, transplant singly to 3-inch pots or into shallow boxes 4 in. apart each way. Transplant in the open ground, after all danger of frost is past, 3 to 4 ft. apart each way. Cultivate frequently. A packet will produce about 300 plants, an oz. about 3,500 plants, enough for an acre.

651 Maule's Earliest of All (86 days) *

*The Greatest of All Early Tomatoes
Four Days to a Week Earlier Than Any Other*

Maule's Earliest of All is the best red Tomato for home gardens and market. Its extreme earliness is not its only merit for the fruits are large, rich in color, and extremely meaty. They do not crack, neither do they have a hard core. While they are a trifle irregular in shape, they are not rough. When we say that it is the earliest Tomato, we are fully aware of the claims made for June Pink, Earliana, and others. If you have not given this wonderful Tomato a trial, you will neglect your own interests if you do not include it in your order.

Pkt. 15c; $\frac{1}{2}$ oz. 30c; oz. 50c; $\frac{1}{4}$ lb. \$1.45; $\frac{1}{2}$ lb. \$2.65; lb. \$4.85.

662 June Pink—The Pink Earliana (90 days)

Purplish Pink Skin; Pinkish Red Flesh

Ripens nearly as early as Earliana but the fruits have a bright purplish pink skin. Vines make a compact, vigorous growth and carry a great quantity of handsome, good-sized fruits which are somewhat flattened and borne in clusters of 6 to 8. Popular in many sections.

679 Livingston's Globe (100 days)

681 Pritchard or Scarlet Topper (95 days)*

An Outstanding Wilt-Resistant Scarlet-Red Tomato

Developed by Dr. F. J. Pritchard of the Department of Agriculture, Washington, D. C., who succeeded in producing a wilt-resistant Tomato of the type of plant known as self-pruning or self-topping. Fruits are large, round, perfectly smooth and of an intense scarlet-red color. Good home and market variety and particularly desirable for shipping as the fruits are handsome, sound and extremely free from disease. Plants thrifty and productive through a long season. It is a cross between Cooper's Special and Marglobe but ripens before Marglobe.

Its shape, beautiful scarlet color, and its eating qualities cause it to be given first place wherever grown—for home, market or shipping. If you have been troubled with wilt or rust in growing Tomatoes, you should certainly grow this variety; growers in all sections where Marglobe has been grown, report enormous production.

MAULE'S NEW FLOWERS

3 Double Marigolds

Yellow Crown

1550 Splendid companion to the famous "Crown of Gold"—the most sensational flower ever introduced. Flowers are of about the same form; the crest or crown is made up of many curled and interlaced florets resembling small Chrysanthemums while the collar surrounding the crown is composed of broad, recurving petals. Entire flower is pure bright canary yellow. Foliage is entirely odorless. 20 in. tall. Pkt. 25c; 2 pkts. 45c; 5 pkts. \$1.00.

Sunset Giants

1551 Remarkably new, extremely large Marigolds often 5 in. or more across. They are made up of broad, gracefully overlapping petals loosely arranged in a most artistic manner. The colors range from deep orange to delightful primrose-yellow. Plants grow 3½ ft. tall, and produce an abundance of enormous flowers on long, strong stems. Pkt. 10c; ½ oz. 30c.

Royal Scot Alldouble

1552 Free blooming plants of dwarf, bushy, compact growth, about 1 ft. tall. The flowers are practically all double and of the most unique coloring—rich mahogany and gold in uniform stripes. This new Dwarf Double French Marigold is superb for bedding and cut flowers. Special Mention, All-America Selections. Pkt. 15c; ½ oz. 50c; ¼ oz. 85c.

Marigold, Yellow Crown

Marigold, Flaming Fire

Larkspur, Royalty

Nasturtium, Orange Glory

Centaurea, Jubilee Gem

Marigold, Flaming Fire

1553 Wonderful new Tall Single French Marigold. Flowers are large, 2 in. across and freely borne on long, thin stems. Showy in the garden; unsurpassed for cutting. Blooms vary in color with the seasons, from almost pure yellow to rich flaming red; often yellow, yellow spotted red, and red flowers will be found on the same plant at the same time. This creates a most charming and unusual effect. Plants are much branched, 2½ ft. tall and early blooming. Pkt. 25c; 2 pkts. 45c; 5 pkts. \$1.00.

Centaurea, Jubilee Gem

1224 Where blue flowers are wanted this lovely Dwarf Cornflower will be found most desirable. Plants are of neat, dwarf compact growth, about 1 ft. tall, and are literally covered with rich bright blue double blooms carried well above the foliage. Fine for edgings, borders, rockeries and pot culture. Of easiest culture, growing to perfection in ordinary garden loam. Each plant is a bouquet itself. Pkt. 20c; 2 pkts. 35c; ¼ oz. 65c.

Larkspur, Royalty

1416 With the introduction of this outstanding new variety, the group of Giant Hyacinth-flowered Larkspurs has been enriched by a marvelous new color—clear rosy lavender. The stately, massive flower spikes are unusually large, and are well filled with extra double blooms quite early in the season. The plants grow as much as 4 ft. tall. Valuable in the border and unexcelled for cutting. Pkt. 25c; 2 pkts. 45c; ½ oz. 60c.

Nasturtium, Orange Glory

1543 Of true dwarf bush type, forming neat symmetrical mounds 1½ ft. tall and often 2½ ft. wide. Flowers are quite double, very fragrant, and of the largest size, often growing 3 in. across. They are rich bright orange with just a touch of garnet-brown at the base of the upper petals and inside the throat, radiating in fan-like fashion into the upper petals which are wonderfully fluted and crinkled. Pkt. 25c; 2 pkts. 45c; 5 pkts. \$1.00.

Petunia, Salmon Supreme

1707 An entirely new color in Petunias which is sure to become most popular with flower lovers and florists alike. The flowers, when first opening, are of rich coral-salmon changing to a marvelous soft salmon-pink as they fully expand. They grow 2 in. across and are produced with the greatest freedom on neat plants of rounded, compact form, about 1 ft. tall. Ideal for borders, edgings or beds. Pkt. 35c; 2 pkts. 65c; 3 pkts. 95c.

Petunia, Burgundy

1708 A welcome addition to the class of Large Flowered Single Petunias. The color of the well-shaped flowers is most unusual—deep Burgundy-red with a rich velvety sheen, the beauty of which is further enhanced by a contrasting white throat with purplish red veining. The blooms, which grow fully 3½ in. across, are most attractive. Pkt. 25c; 2 pkts. 45c; 1/128 oz. 75c.

Marigold, Crown of Gold

Best New Flower of 1937. First Marigold with odorless foliage.

Sweet Pea, Abundance New Many-Flowered Class

1790 Distinct and entirely new Sweet Pea—the forerunner of a new class which undoubtedly will become most popular with gardeners everywhere. Its outstanding characteristic is that it produces six good sized flowers to a stem as a rule, but even seven and eight blooms to a stem are not uncommon. Occasionally stems with as many as nine flowers have been found, so that the name "Abundance" seems quite appropriate.

The plants are of exceptional vigorous growth and bloom freely and abundantly over a long period. The flowers are bright clear warm mauve such as is found in some Cattleya Orchids. They are placed artistically along the stems which are long, strong and wiry. Make a charming bouquet.

Pkt. 25c; 2 pkts. 45c; ½ oz. \$1.35.

Eschscholtzia, My Favorite

1354 Plants are of strictly erect, uniform growth, 15 in. tall, and as they do not spread or sprawl are of the most tidy appearance throughout the season. The foliage is of a distinct silvery green color in perfect harmony with the fine large flowers which are apricot-buff suffused salmon. The inside of the flower petals is several shades deeper and shows a most attractive silky sheen. Highly desirable for edgings and borders.

Pkt. 25c; 2 pkts. 45c; 5 pkts. \$1.00.

Mignonette, Red Monarch

1475 Enormous trusses of the deepest red imaginable. Plants are of compact growth, making them equally valuable for outdoors and pot culture. The magnificent, well-formed spikes are quite fragrant and furnish excellent material for bouquets throughout the summer and fall. Mignonette delights in a fairly moist sandy soil which is well enriched with thoroughly decomposed manure. Frequent cutting of the spikes will insure a good crop throughout the season.

Pkt. 15c; ½ oz. 40c; ¼ oz. 70c.

Calendula, Orange Fantasy

1141 Quite a departure from the old type of Calendulas. The fine large blooms, which grow 3¾ in. across, are of a rich deep coppery orange with the petals edged deep mahogany-red. The blooms are composed of a few rows of long, beautifully twisted outer petals and numerous short, attractively interlaced inner petals which form a distinct, heavy crest around a large mahogany-bronze center. Showy and unusual. Fine cut flowers. Plants grow about 15 in. high and are very free blooming.

Pkt. 25c; 2 pkts. 45c; 5 pkts. \$1.00.

Zinnia, Fancy Tints

2064 The largest of all Zinnias, with the blooms often growing 5 in. or more across and as much as 4 in. deep. The color is a glorious combination of cerise tints, gold and rose. A true Giant Dahlia-Flowered Zinnia which will make a beautiful display in the garden and also furnish excellent cut flower material.

Pkt. 20c; ½ oz. 50c; ¼ oz. 90c.

Aster, Vick's Supreme

1087 Gorgeous Aster which has so many good points in its favor it should have a place in every garden. The flowers are exceptionally large, artistically formed and of a dainty shell-pink color. The long narrow petals are interlaced in a most pleasing manner. Plants grow about 20 in. tall and are low branching, thereby producing extra long stems. A cut flower of great merit. Sure to attract attention.

Pkt. 20c; ½ oz. 60c; ¼ oz. \$1.00.

Snapdragon Super Majestic (Rust-Resistant)

972 All Colors, Choicest Mixed If you have had trouble growing Snapdragons on account of the rust disease, we suggest that you try this new strain which is highly immune to the disease. Spikes grow about 2 ft. tall and in our gardens many plants were seen each with 20 to 30 spikes in bloom at the one time. Of course, these were grown under ideal conditions; 10 to 20 spikes per plant were about average. Individual flowers are quite large and well placed on the long spikes; the lateral ones nearly equalling the central one for size and form.

All the colors found in this wonder flower are in this mixture and there are others never seen before in Snapdragons. Be sure to grow it for it is lovely for all purposes.

Pkt. 25c; 1/16 oz. 60c; ½ oz. \$1.00.

MAULE'S BEAUTIFUL ASTERS

With its many and varied forms, its wide range of color, and its real beauty, the Aster is deservedly one of the most popular flowers we have. By planting early, midseason and late varieties you may have Asters from June to frost. **W. R.** means Wilt-Resistant—resistant to the destructive Wilt disease. We offer all that have been bred so far, and will add more as they are developed.

Asters bloom from three to five months after seed is sown, varying with the variety and the climate. By starting the seed indoors, 6 weeks before outdoor planting time, earlier blooms may be had. Give your Asters rich, well-drained soil, plenty of moisture and sunshine, and they will repay you. The location of the Aster bed should be changed every year.

SNAPDRAGONS

For color in the garden, or grown commercially by florists in greenhouses during the winter, or as cut flowers, Snapdragons have been universal favorites for years. The introduction of new and varied types has made them more popular than ever. All are easily grown in ordinary, well-drained garden soil in either full sun or semi-shade. Flowers are freely produced for several months and until frost where conditions are favorable. For earliest blooms sow seed indoors about six weeks before your regular outdoor planting time; for later flowers sow outdoors in the spring when the soil has become quite warm.

Giant Double Dahlia-Flowered Zinnias

Flowers are very large, 5 in. and more across, and about 2 in. in depth; they greatly resemble Giant Dahlias. Plants grow about 3 ft. tall, are sturdy, well-branched, and hold their showy, long-stemmed flowers well above the foliage. Bright and showy in the garden, beds or borders, and wonderful for cutting as the flowers last for such a long time.

Dahlia-Flowered Zinnia (flowers grow 5 in. across)

- 2071 **Canary Bird** Delicate primrose-yellow, the color varying as the flowers mature.
- 2055 **Crimson Monarch** Bright crimson-scarlet. Very popular on account of its striking color.
- 2059 **Desert Gold** Yellow and gold shades, each petal shaded deeper golden yellow at its base.
- 2058 **Dream** Deep lilac-lavender changing to rich, warm purple as flowers age.
- 2083 **Exquisite** Light rose with deeper rose center; a lovely two-toned color effect.
- 2062 **Golden Dawn** Golden yellow. Newly opened flowers are a rich light orange shade.
- 2057 **Illumination** The name aptly describes the vivid, luminous, deep Tyrian-rose color.

Any of the above Dahlia-Flowered Zinnias: Pkt. 10c; 1/8 oz. 30c; 1/4 oz. 50c.

Cupid Zinnias—Smallest of All

2069 **Mixed Colors** Flowers grow less than one inch across and are borne continuously from early summer until frost. Fine for beds, borders, edgings, and rock gardens. Flowers are borne on stems long enough for cutting. Our mixture contains rich scarlet, bright yellow, pure white, lilac and other shades. 1 ft. Pkt. 10c; 1/8 oz. 35c.

Scabiosa-Flowered Zinnias

2097 **Mixed Colors** Scabiosa-like flowers, 2 1/2 to 3 in. across, with cushion-crested centers surrounded by a row of broad ray petals. Rose, orange, yellow, crimson and scarlet shades, also white in mixture. 2 to 2 1/2 ft. Pkt. 10c; 1/8 oz. 30c.
